

THE OIL AND GAS INDUSTRY

Reservoir	----- Properties of rocks and fluids, drive mechanisms, Simulation, Enhanced Oil Recovery
Drilling	----- Well drilling plan and execution, casing, cementing, mud engineering, fishing, logging
Well Completion	----- Perforating, tubing and packing, safety valves, installing Christmas Tree and bringing well on stream
Production	----- Production of oil and gas, initial processing (separation, metering, storage), artificial lift
Pipeline	----- Transportation of crude oil, natural gas, finished product, LNG
Tankers – Rail, Road	
Ships	
Refining	----- Separation and conversion of crude oil into fuels and lubes
Petrochemicals	----- Conversion of naphtha (from refinery) or natural gas into petrochemicals
Natural Gas Processing	----- Acid Gas Removal, Dehydration, Mercury Removal, NGL Recovery, Sweetening
LNG	----- Natural Gas processing and conversion to liquid form
Oil Field Services	----- Products and services associated with the oil and gas exploration and production process, i.e. the upstream sector (reservoir to production activities)
Feasibility, Concept and EPC Services	----- Designing and installation of facilities required for the production, processing and refining of oil and gas (offshore and onshore production rigs, refinery units, petrochemical plants, LNG, pipelines, etc)
